

A modern office interior with large arched windows, green chairs, and people working. The scene is bright and airy, with natural light streaming in from the windows. Several people are engaged in work: a woman is seated at a desk on the left, a man stands in the background near a window, a woman and a man are standing and looking at a tablet together, and another man is seated on the right. The office is furnished with green ergonomic chairs and long white tables. Potted plants are placed near the windows.

OneDrive Known Folder Move (KFM) Workshop

Scope of this deck

Scope

Provide guidance on how you can **roll out OneDrive KFM**:

Deploy OneDrive client and log installation

Define OneDrive policy to enable KFM

Check compliance on managed devices and remediate KFM settings

Report on OneDrive deployment and configuration

Out of Scope

The following topics are **outside** the focus of this presentation:

Setting up core infrastructure (AD, DNS, AD Connect, SCCM)

Third-party tools and/or custom applications integration

Agenda

What we'll cover

1. Pre-requisites

2. Plan for Scenarios

3. Deployment

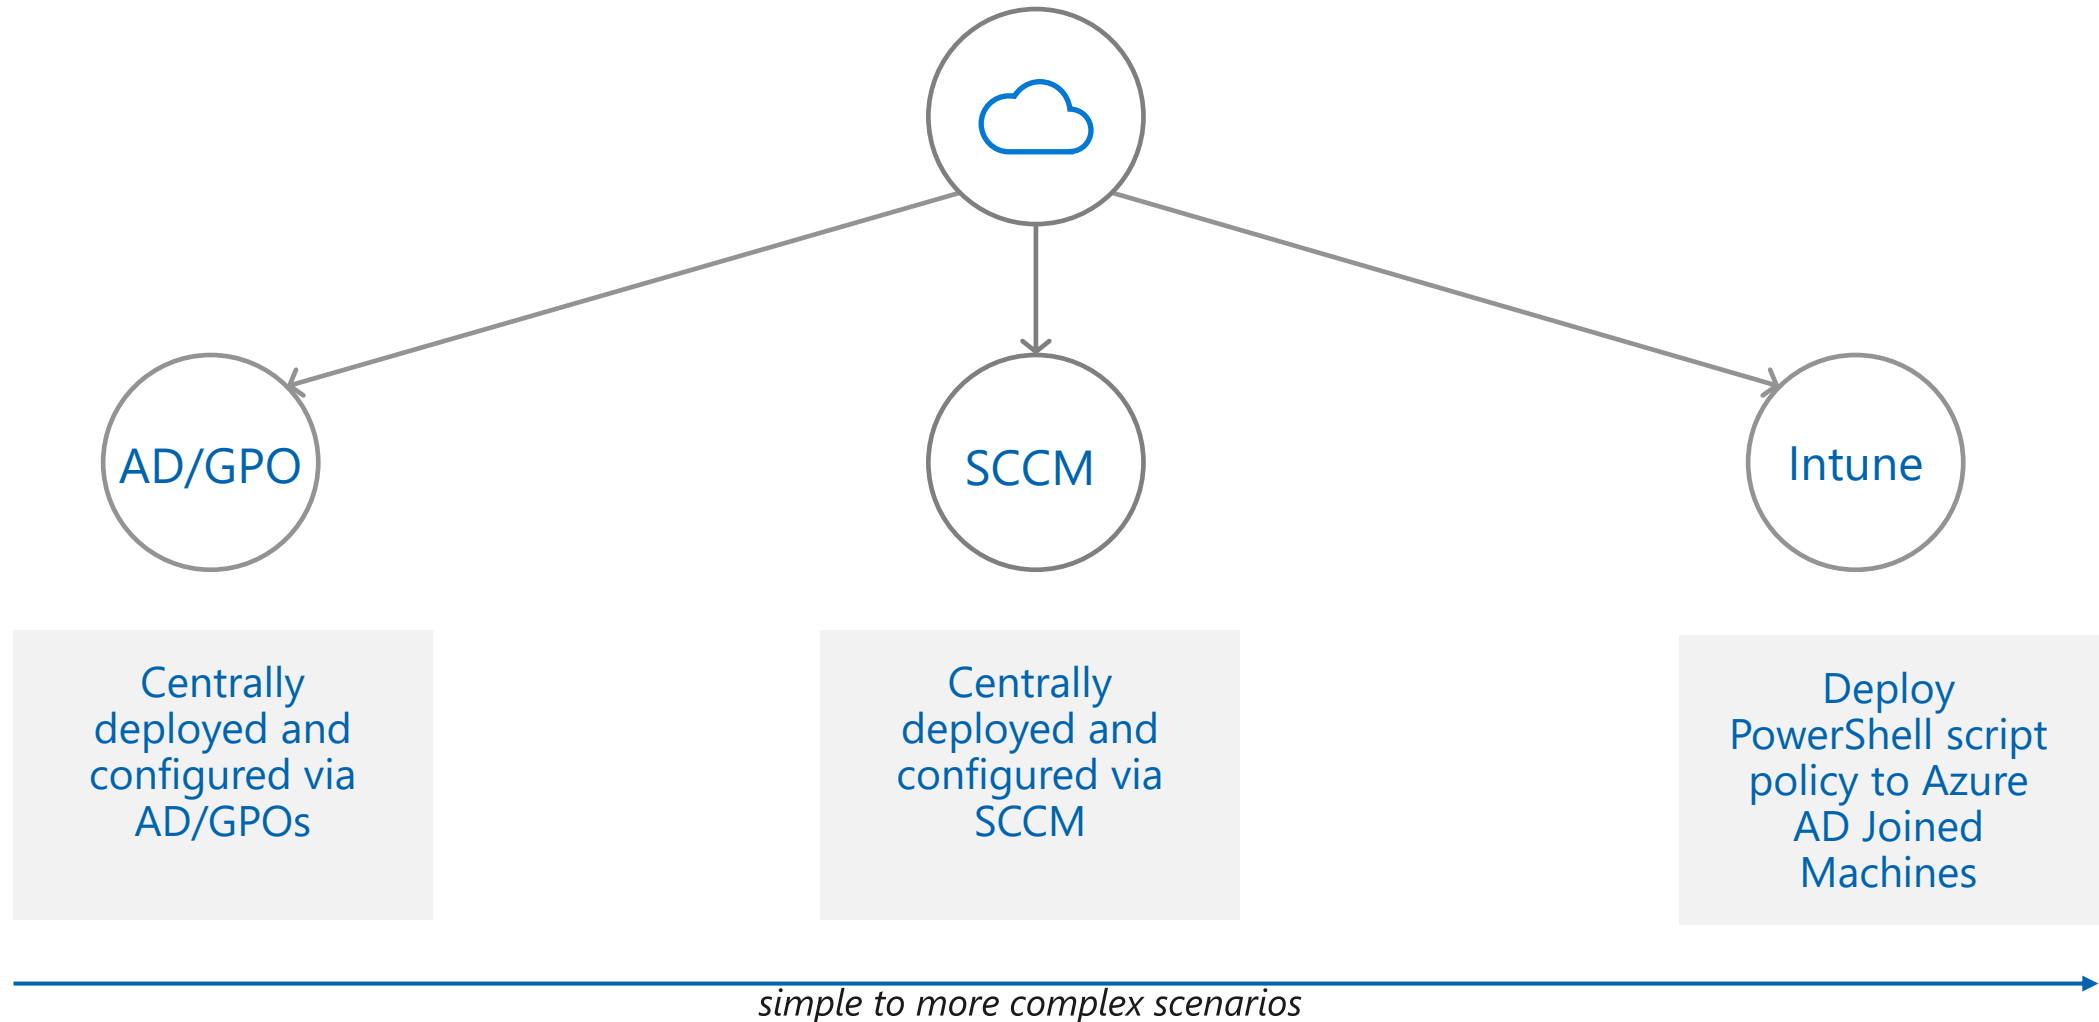

4. Report and monitor

Keep your files protected
and backed up using KFM

Ways to Deploy

Choose the simplest option based on your requirements

Plan for common challenges

Limited Network Bandwidth

Assess the number of users and computers per user to which you'll deploy the sync client.

[Assess the available bandwidth and network conditions.](#)

[Measure the network utilization of the sync client for a pilot group.](#)

When you deploy, [control the sync throughput](#) and [limit sync upload rate](#).

Roll out gradually and monitor for issues

OneNote and/or PST in known folders

Proactively report which users have OneNote files or .PST files in their known folders, OR

Reactively engage with those users if it fails for them to move those files elsewhere, e.g. [OneNote](#)

OneNote migration with KFM – [In development](#)

Require other known folders like Favorites, Videos, etc.

For other known folders like Favorites and Videos, please use [Folder Redirection with Offline Files](#) . Keep in mind KFM won't work if you have previously used Folder Redirection on Desktop, Pictures, or Documents.

Plan for common challenges continued

Large Mac Device population

Upvote the following [user voice regarding Mac + KFM](#).

Limited storage on machines

Deploy using [Files on Demand](#).

VDI environment

[Only persistent desktop environments](#) are supported at this time

Windows Virtual Desktop provides new Windows 10 Multi-User (EVD) OS with Office, OneDrive Files On-Demand (per machine), Microsoft Teams and more – [in development](#).

Deploy KFM using Active Directory + GPOs

Option 1

OneDrive KFM GPO

Use Group Policy Management console

Add OneDrive ADM files to central store

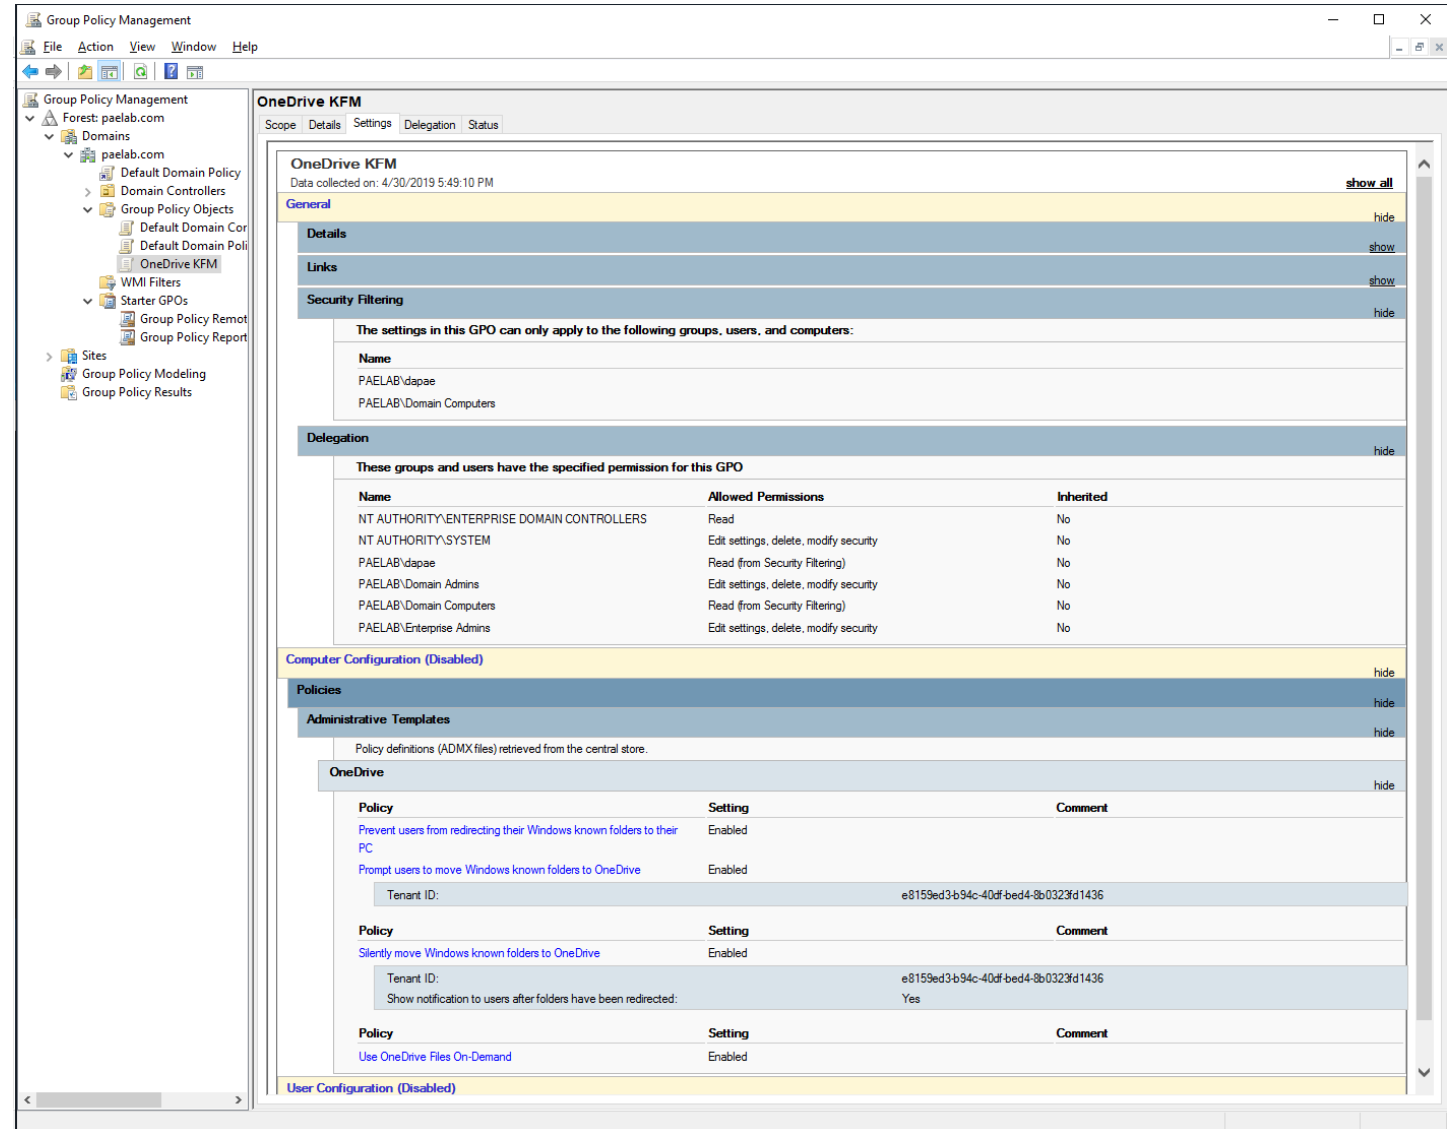

Configure OneDrive GPO settings

Specify subset of users or computers for OneDrive KFM GPOs using security filtering

Link GPO to a new or existing OU

Evaluate the deployment and make policy adjustments

Add next wave of objects to security group used in GPO security filtering

Key GPOs when first deploying KFM

| Registry Key | Description | Enabling this policy |
|------------------------------------|--|--|
| KFMOptInWithWizard | Prompt users to move Windows known folders to OneDrive | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"KFMOptInWithWizard"="Tenant ID" |
| KFMBlockOptOut | Prevent users from redirecting their Windows known folders to their PC. Enable to disable the "Stop protecting" button. | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"KFMBlockOptOut"="dword:00000001" |
| KFMSilentOptIn | Silently move Windows known folders to OneDrive. Use this setting to redirect your users' Documents, Pictures, and Desktop folders to OneDrive without any user interaction. | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"KFMSilentOptIn"="Tenant ID" |
| KFMSilentOptInWithNotification | Notify user after successful folder redirection. | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"KFMSilentOptInWithNotification" = "dword:00000001" |
| AutomaticUploadBandwidthPercentage | Limit the sync client upload rate to a percentage of throughput. Recommend setting when enabling KFMSilentOptIn or KFMOptInWithWizardsilently. | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"AutomaticUploadBandwidthPercentage"="dword:00000032" Hexadecimal 32 = Decimal 50 or 50% of throughput |
| FilesOnDemandEnabled (optional) | Use OneDrive Files On-Demand. This setting lets you control whether OneDrive Files On-Demand is enabled for your organization. | [HKLM\SOFTWARE\Policies\Microsoft\OneDrive]"FilesOnDemandEnabled"="dword:00000001" |

Visit <https://docs.microsoft.com/en-us/onedrive/use-group-policy> for entire list of OneDrive sync client settings

Monitor with PowerShell

Script will check:

Know Folder Move (KFM) eligibility (for whatever device it was run on)

Payload details (number of items and size of content within known folders)

KFM status (have the known folders been moved to OneDrive)

KFM GPO state (what GPOs have been set)

<https://aka.ms/kfmStatus>

alland_WIN10X64 - Notepad

File Edit Format View Help

True | Device_is_KFM_GPO_eligible

True | Desktop_is_in_OneDrive

True | Documents_is_in_OneDrive

True | Pictures_is_in_OneDrive

False | KFM_Opt_In_Wizard_Set

False | KFM_Block_Opt_Out_Set

19.043.0304.0007 | OneDrive Sync client version

Deploy KFM using SCCM

Option 2

Pre-requisites

OneDrive users licensed and [sites provisioned](#)

Sync Client Version
18.111.0603.0004 or later

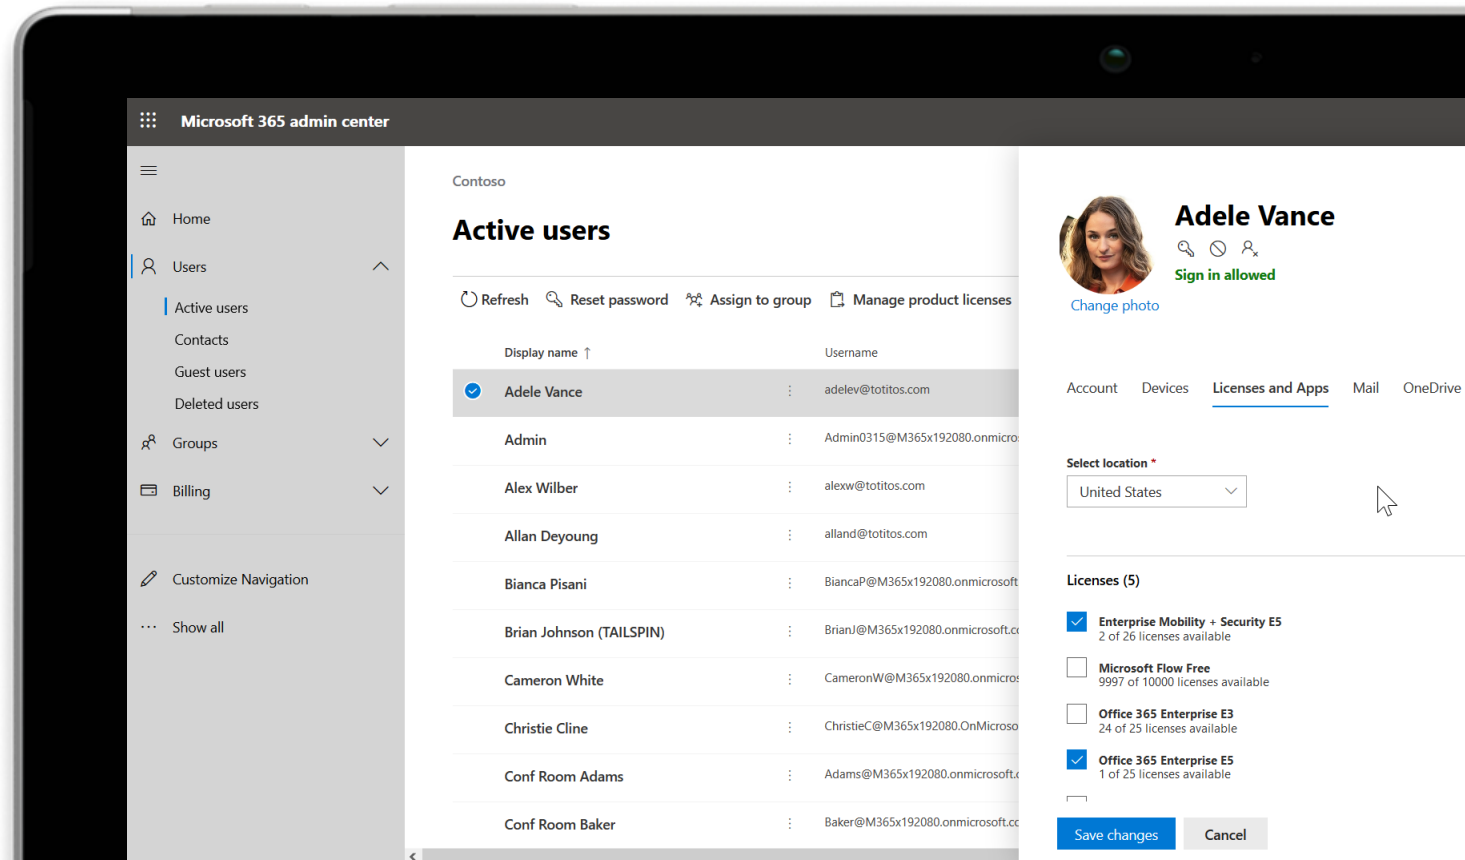

O365 Admin Portal Access

System Center Configuration Manager (current) is setup and ready to deploy apps and configurations

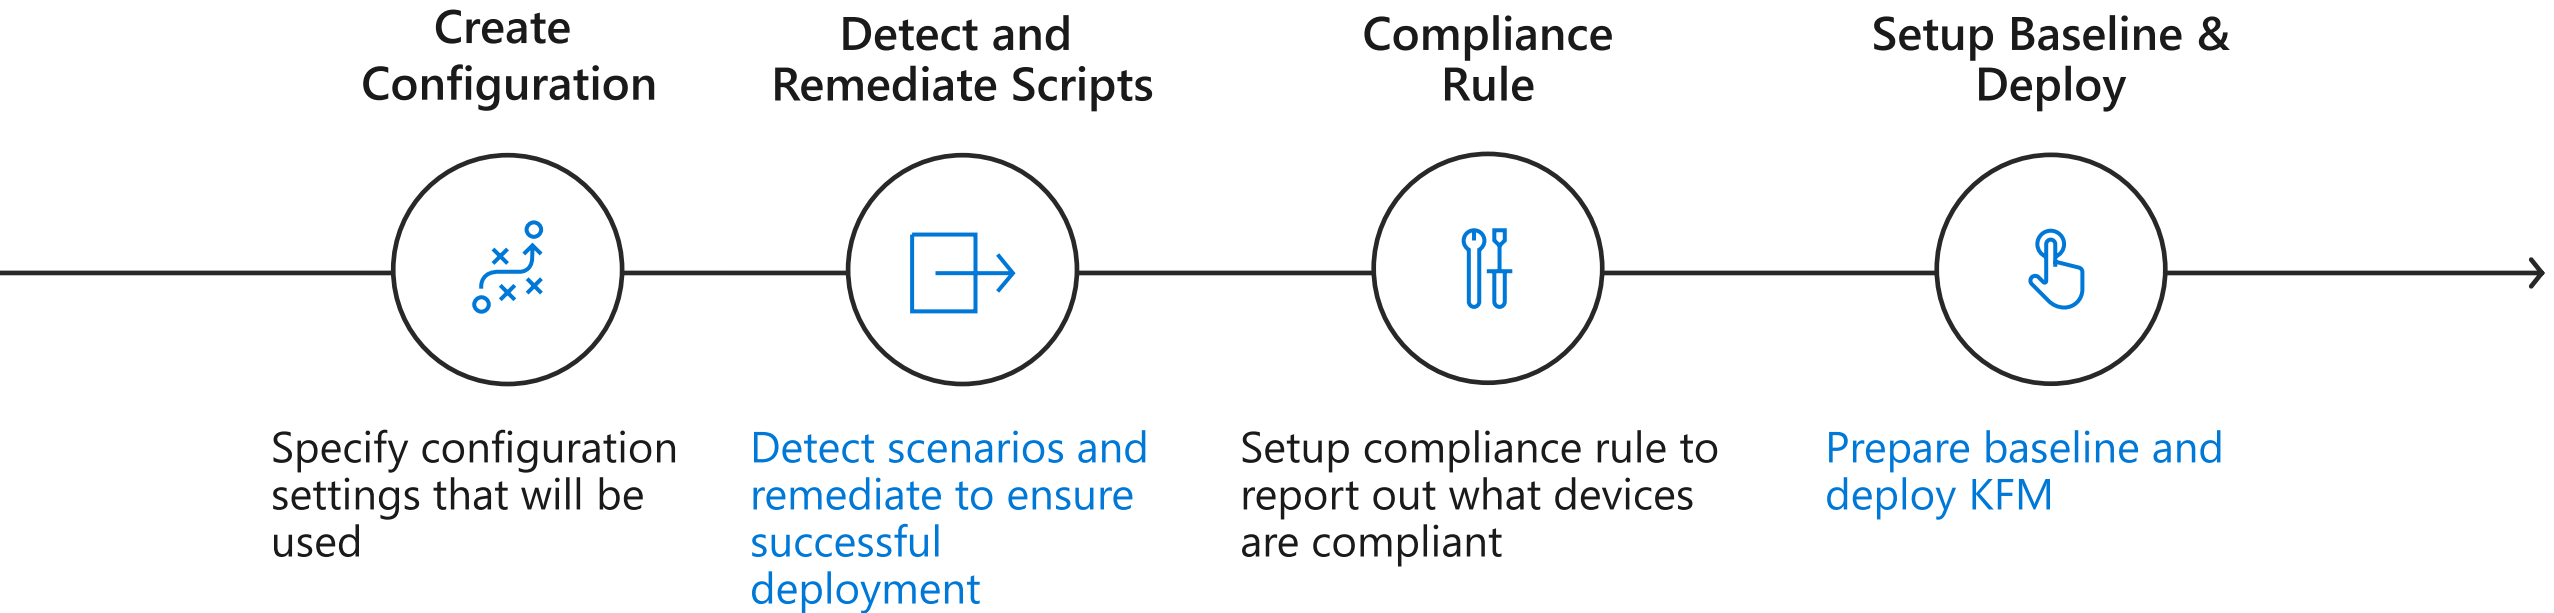

PowerShell scripts can run on Windows devices

Network team included in bandwidth conversations

SSCM Build 1902 introduces a OneDrive for Business profile to setup a compliance policy

Deploy KFM via SCCM

<https://docs.microsoft.com/OneDrive>

Create a Configuration Item (CI)

CI contains detection, remediation and compliance rules. For OneDrive:

Specify the Windows OS version

Script to detect the OneDrive registry key

Script a remediation steps to add OneDrive KFM registry keys/values

Use a compliance rule to remediate the OneDrive KFM policy

The screenshot shows the 'OneDrive Known Folder Move Properties' dialog box. The 'General' tab is selected, displaying the following information:

- Name:** OneDrive Known Folder Move
- Description:** CI for OneDrive Known Folder Move
- Revision:** 8
- Type:** Operating System
- Relationships:** Yes
- Date modified:** 4/24/2019 4:13 PM
- Modified by:** PAELAB\dapae

At the bottom, there is a section for 'Assigned categories to improve searching and filtering:' with an empty text box and a 'Categories...' button. The 'OK', 'Cancel', and 'Apply' buttons are at the bottom right.

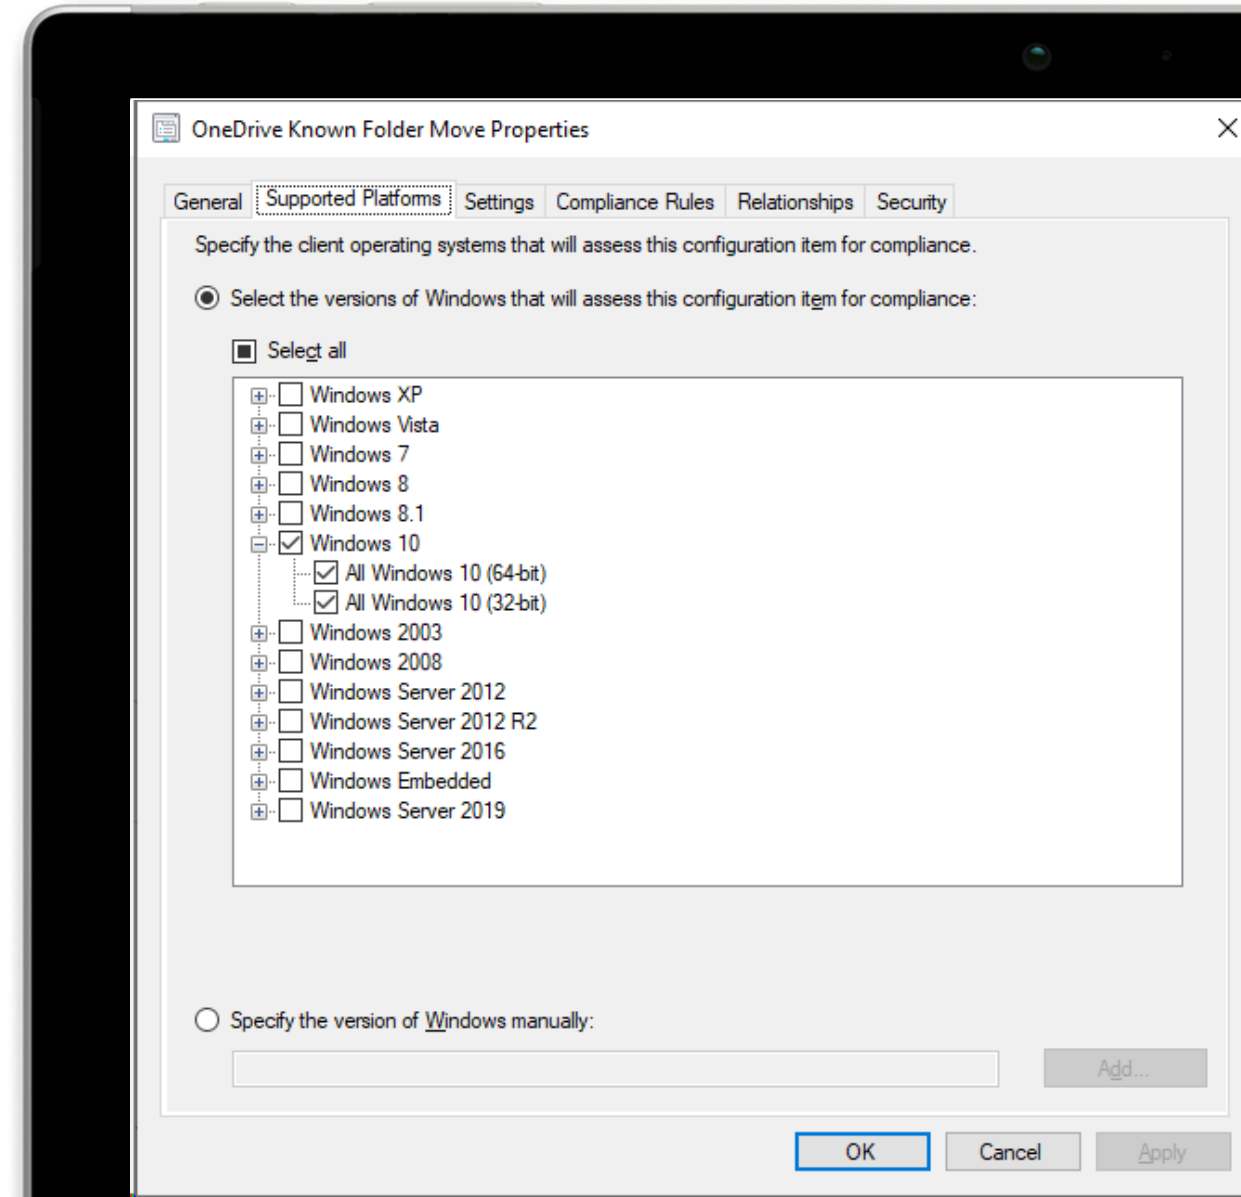

Supported Platforms

Known Folder Move works with:

Windows 7

Windows 8/8.1

Windows 10

Settings – Discovery Script

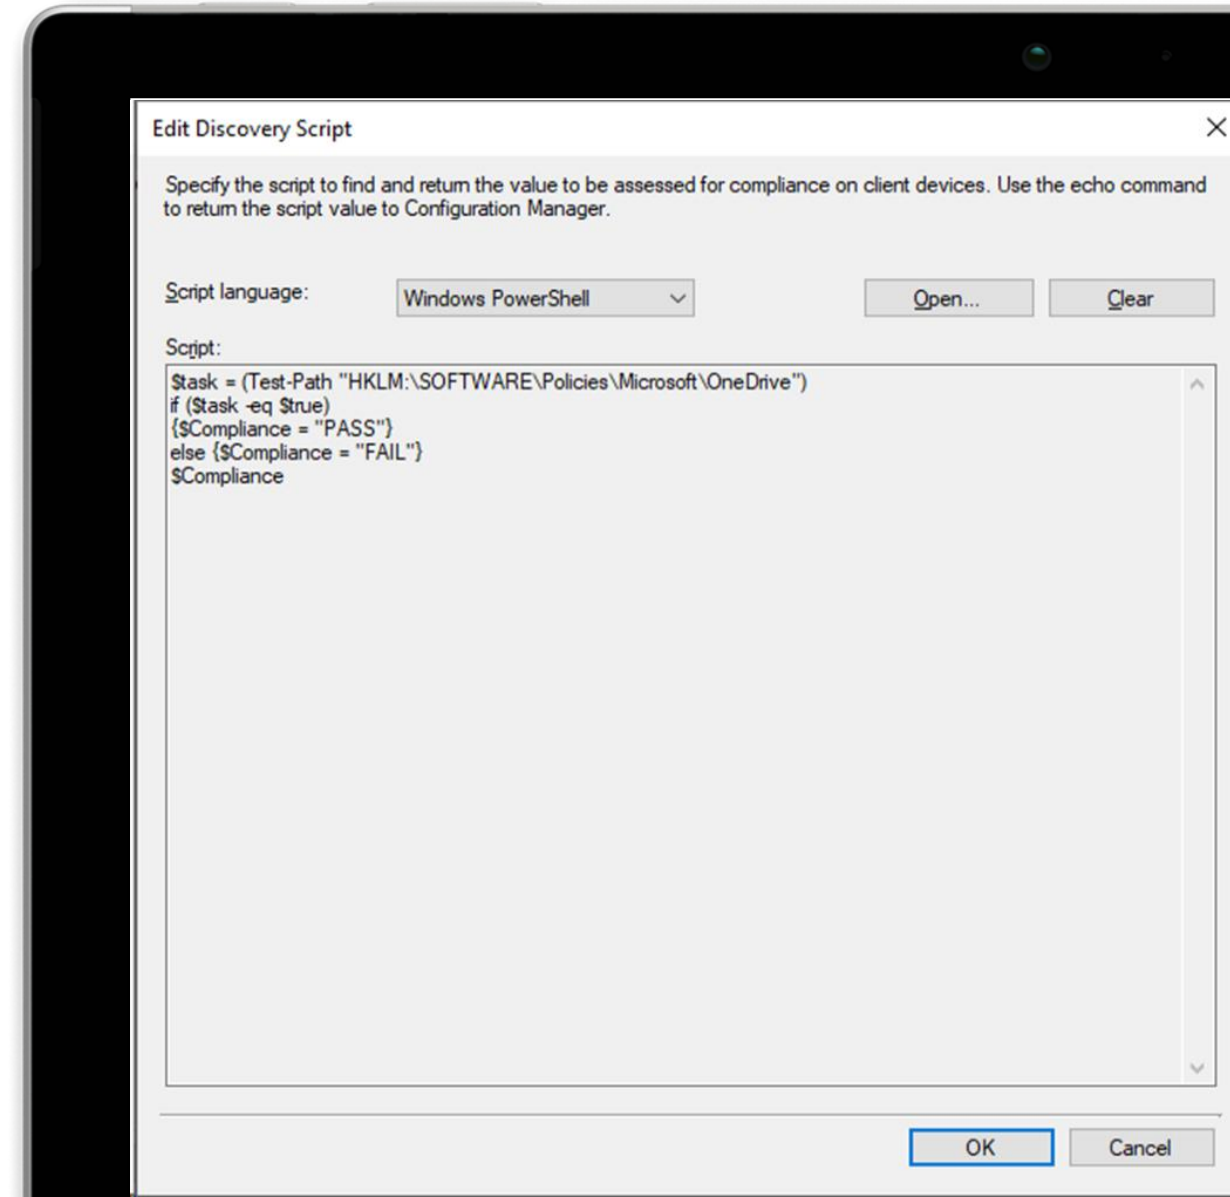

Test for OneDrive registry key

Assign PASS if key exists

Else send FAIL value to compliance rule

Simple to extend to evaluate more

```
$task = (Test-Path
"HKLM:\SOFTWARE\Policies\Microsoft\OneDrive")
If($task -eq $true){
$Compliance = "PASS"
}
Else{
$Compliance = "FAIL"
}
$Compliance
```

Settings – Remediation Script

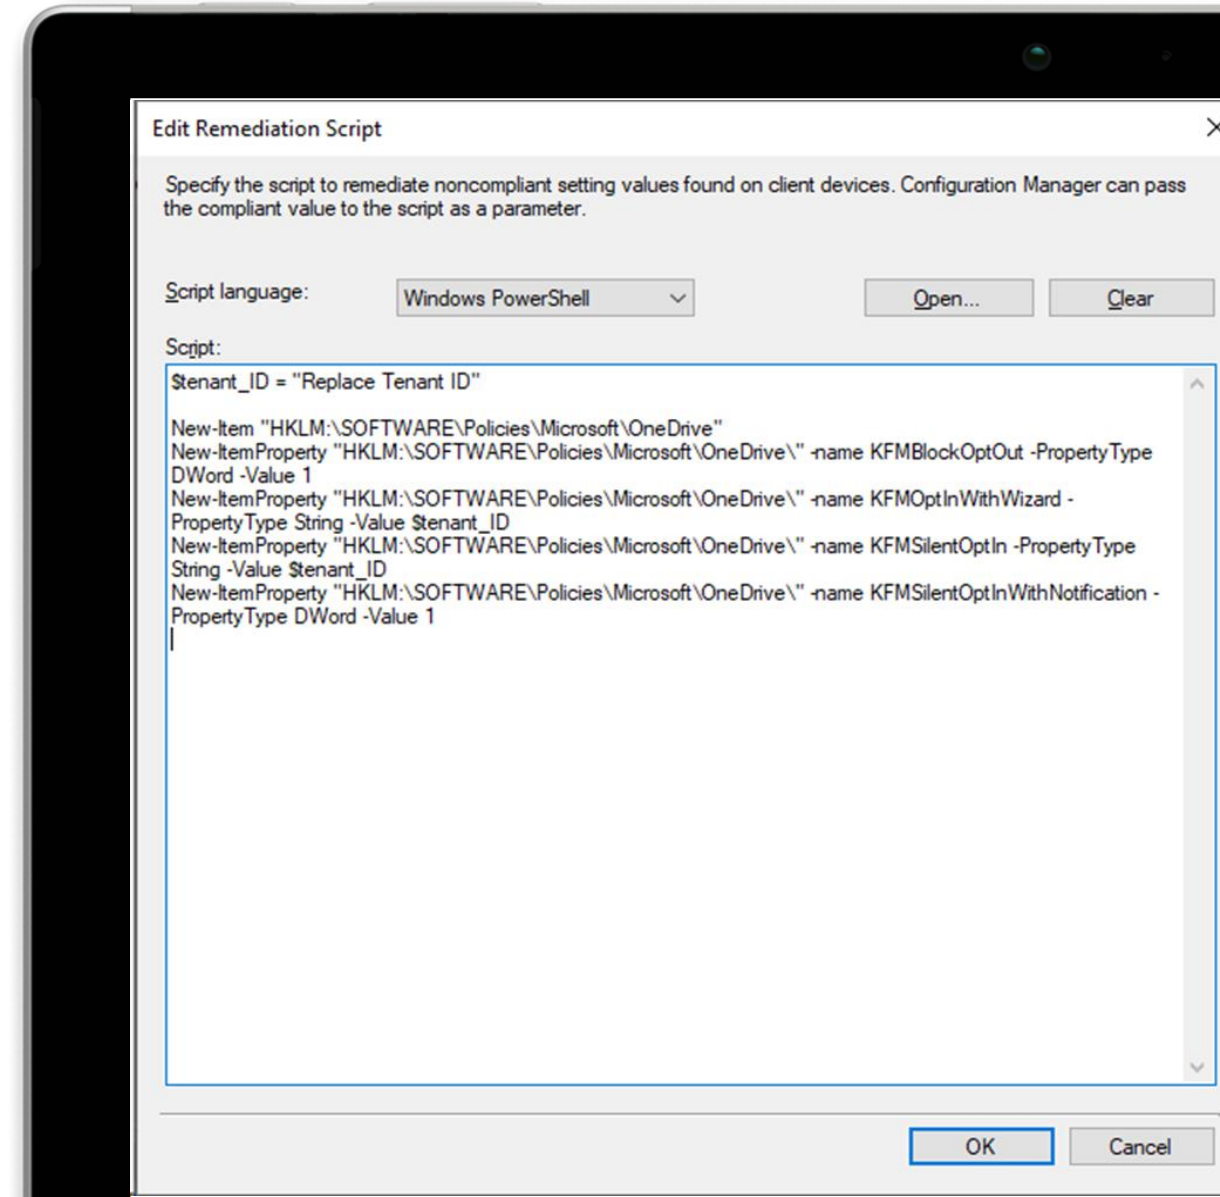

Script exactly which OneDrive KFM policies to deploy

Enforce users to keep known folders directed to OneDrive

Prompt users to move Windows known folders

Silently move known folders and notify when redirection is successful

```
$tenant_ID = "Replace Tenant ID"
New-Item "HKLM:\SOFTWARE\Policies\Microsoft\OneDrive"
New-ItemProperty "HKLM:\SOFTWARE\Policies\Microsoft\OneDrive\" -name
KFMBlockOptOut -PropertyType DWord -Value 1
New-ItemProperty "HKLM:\SOFTWARE\Policies\Microsoft\OneDrive\" -name
KFMOptInWithWizard -PropertyType String -Value $tenant_ID
New-ItemProperty "HKLM:\SOFTWARE\Policies\Microsoft\OneDrive\" -name
KFMSilentOptIn -PropertyType String -Value $tenant_ID
New-ItemProperty "HKLM:\SOFTWARE\Policies\Microsoft\OneDrive\" -name
KFMSilentOptInWithNotification -PropertyType DWord -Value 1
```

Compliance Rules

Detection value passed to rule

PASS = no remediation script

FAIL = remediation script adds
OneDrive registry key/values to non-
compliant device

Must check "Run the specified
remediation script..."

Enable Report noncompliance and set
sev reports

Edit Rule

Specify rules to define compliance conditions for this setting

Name: OneDrive KFM Key Check

Description: Check for OneDrive registry key. Run remediation script if it does not exist.

Selected setting: OneDrive Known Folder Move \ OneDrive KFI

Rule type: Value

The setting must comply with the following rule:

[The value returned by the specified script:] Equals

the following values: PASS

☒ Run the specified remediation script when this setting is noncompliant

☒ Report noncompliance if this setting instance is not found

Noncompliance severity for reports: Information

OK Cancel

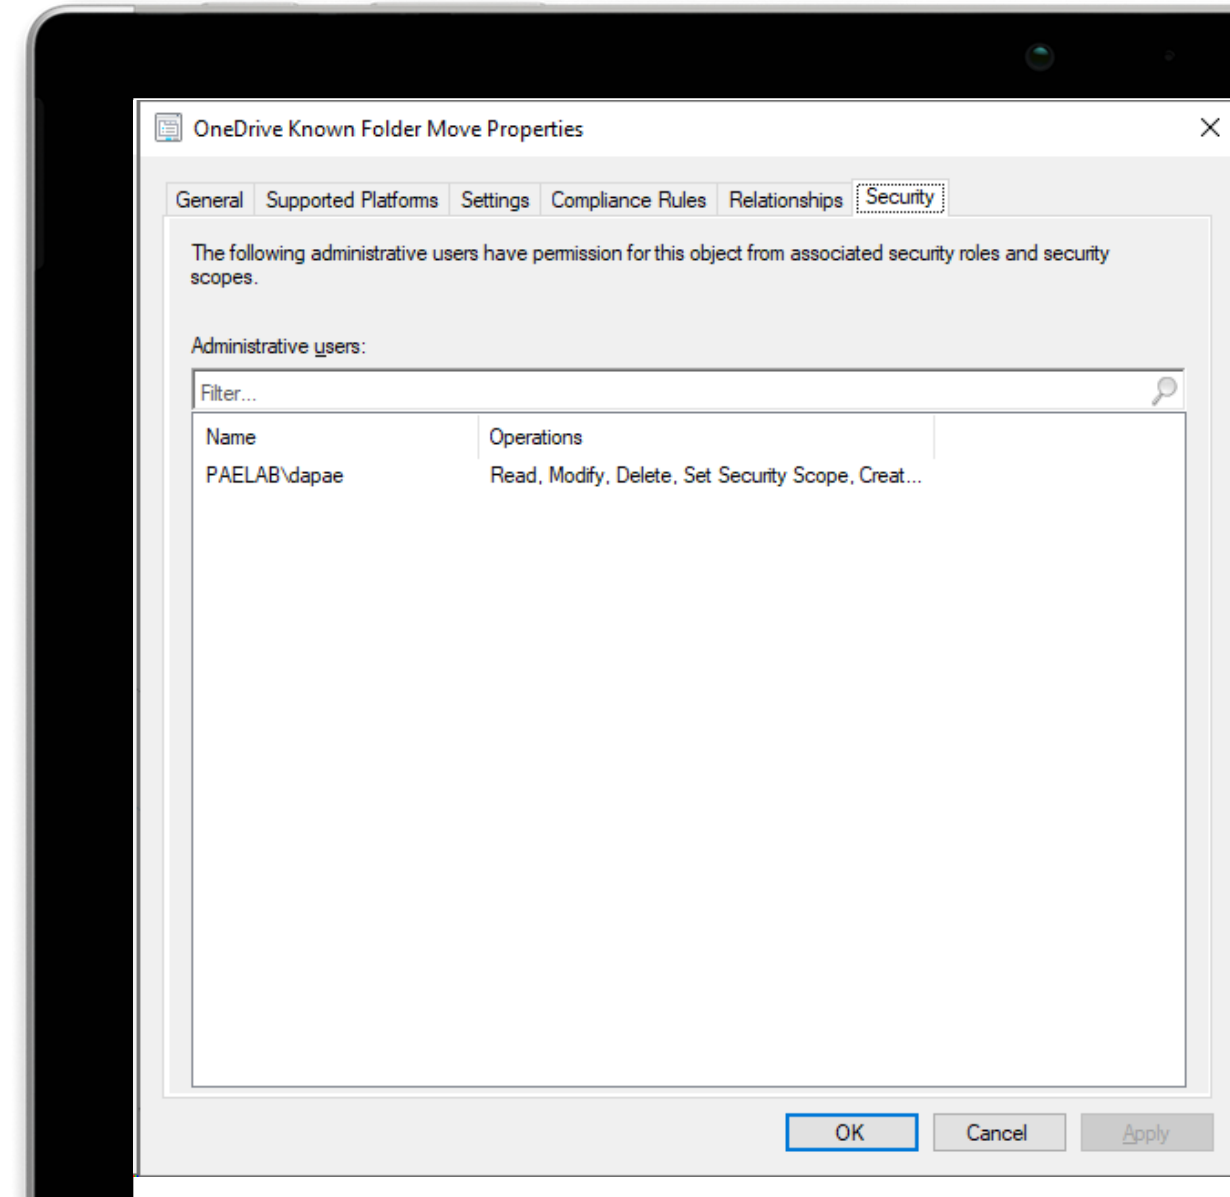

Security

Security content:

This is set using the CI wizard and defines users who can manage a CI.

The administrative users are defined when SCCM is installed/configured.

Configuration Baseline (CB)

Needed to deploy to your device collection

Create a new CB

Add the OneDrive KFM CI

The screenshot shows the 'Create Configuration Baseline' dialog box. The title bar reads 'Create Configuration Baseline'. Below the title bar, the text 'Specify general information about this configuration baseline' is displayed in blue. The dialog contains two text input fields: 'Name' with the value 'OneDrive KFM CB' and 'Description' with the value 'CB for OneDrive CI'. Below these fields, a paragraph of text explains that configuration data (items, baselines, and updates) will be evaluated for compliance. A section titled 'Configuration data:' contains a table with one row of data. Below the table are four buttons: 'Add', 'Change Purpose', 'Change Revision', and 'Remove'. At the bottom, there is a checkbox labeled 'Always apply this baseline even for co-managed clients' and a section for 'Assigned categories to improve searching and filtering:' with an empty text box and a 'Categories...' button. The 'OK' and 'Cancel' buttons are at the bottom right.

Create Configuration Baseline

Specify general information about this configuration baseline

Name: OneDrive KFM CB

Description: CB for OneDrive CI

Select the configuration data (configuration items, configuration baselines, and software updates) to be evaluated for compliance by this configuration baseline. This configuration baseline will be assessed as compliant if all the items specified are compliant. Optional items are evaluated only if the relevant application is present on the client devices.

Configuration data:

| Name | Type | Purpose | Revision |
|----------------------------|------------------|----------|----------|
| OneDrive Known Folder Move | Operating System | Required | Latest |

☐ Always apply this baseline even for co-managed clients

Assigned categories to improve searching and filtering:

Deploy to Device Collection

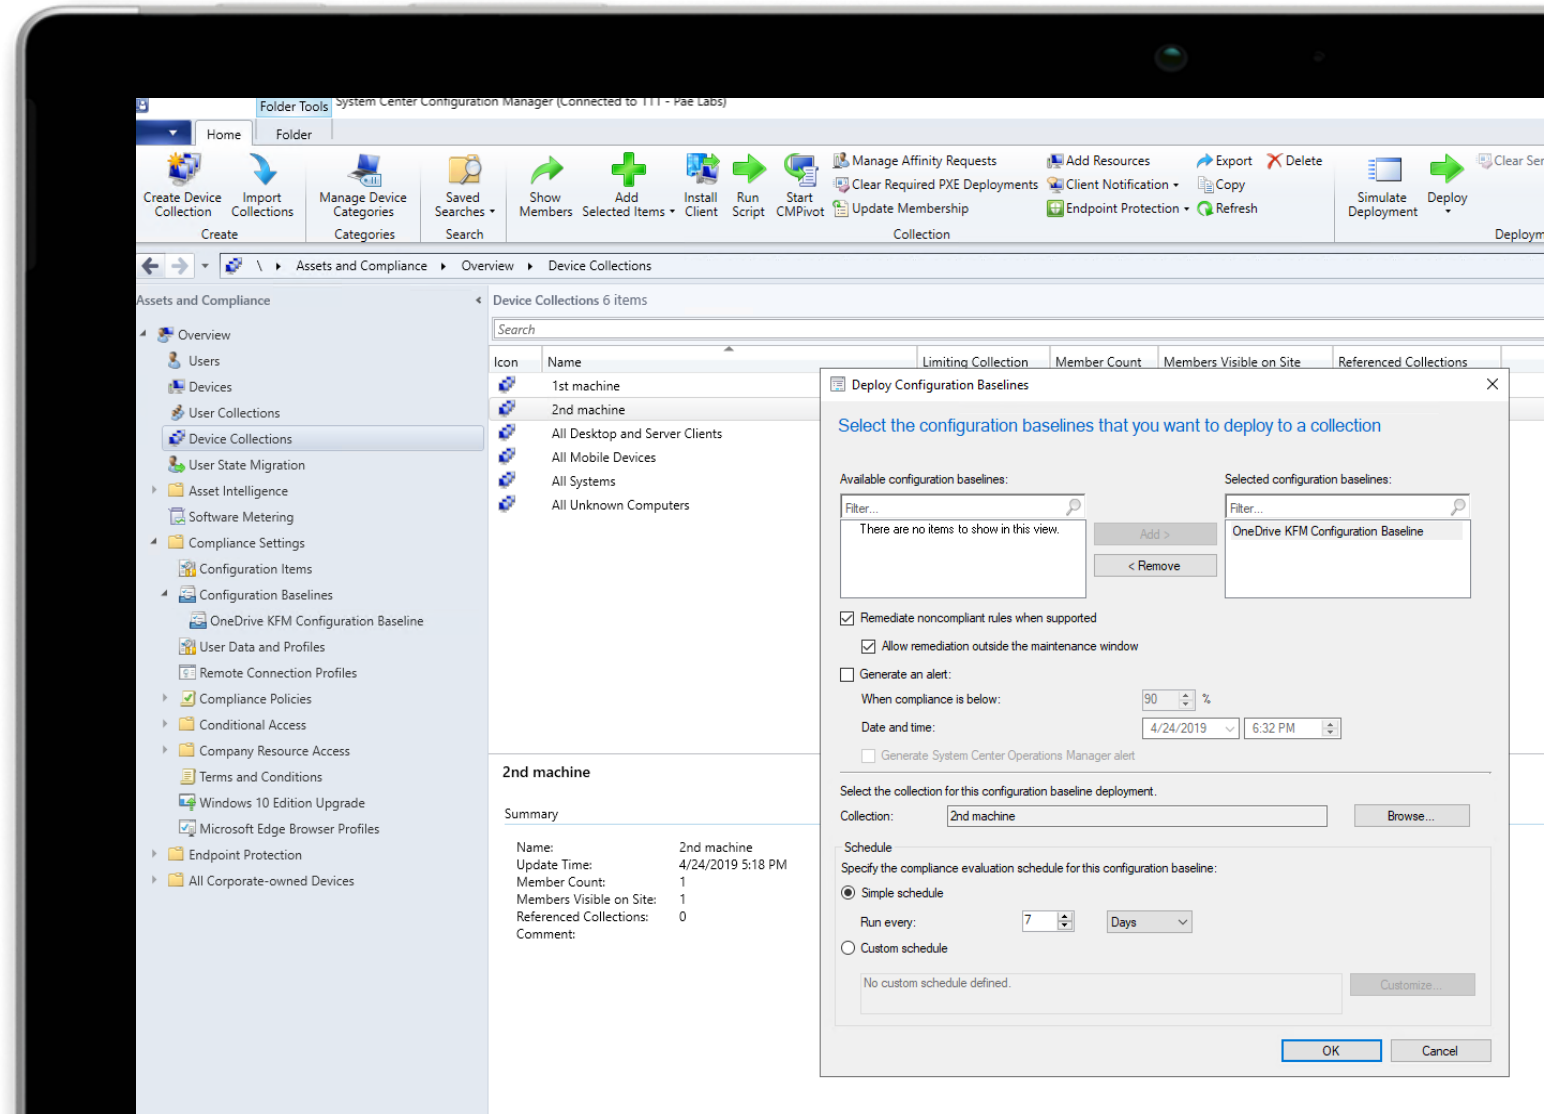

Start with a lab collection

Measure the network impact
and success of the deployment

Review deployment outcomes

Fine-tune the CI scripts if you
need to adjust KFM policies

Repeat for first wave of devices
(IT early adopters)

OneDrive KM Policy Deployed

OneDrive - PAELAB

Your IT department wants you to protect your important folders

These folders are syncing in OneDrive. New and existing files will be added to OneDrive, protected, and available on your other devices, even if you lose this PC.

Deploy KFM using Intune

Option 3

KFM using Intune Requirements

- Licensing:
 - EMS E3/E5
 - M365 E3/E5
 - <https://docs.microsoft.com/en-us/intune/licenses>
- Pre-requisites
 - Must be [joined or registered to Azure AD](#)*
 - [Auto-enrollment configured](#)
 - Windows 10 version 1607 or later
 - Intune extension agent is installed

Copy your Azure Tenant ID

Navigate to Azure AD
admin center:

<https://aad.portal.azure.com>

Copy the "Directory Id"
value

The screenshot displays the Azure Active Directory admin center interface. The top navigation bar shows 'Azure Active Directory admin center' and the user 'admin@M...'. The left sidebar contains navigation options: Dashboard, All services, FAVORITES, Azure Active Directory (with a red notification badge), Users, and Enterprise applications. The main content area is titled 'Contoso - Properties' and includes a search bar. The 'Properties' section is expanded, showing various settings like Custom domain names, Mobility (MDM and MAM), Password reset, Company branding, User settings, Notifications settings, Security, and Monitoring. The 'Directory ID' field is highlighted with a red box, showing the value 'e3f32cca-f299-4a93-bfde-5e483b88244d' and a copy icon. Other fields visible include Name (Contoso), Country or region (United States), Location (United States datacenters), Notification language (English), Technical contact (stockpiling@sharps.com), and Global privacy contact.

Setup PowerShell Script

Update `$TenantID` with the tenant ID you copied earlier:

```
$TenantID = "XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX"
$registryPath = 'HKLM:\SOFTWARE\Policies\Microsoft\OneDrive'##Path to HKLM keys

If(!(Test-Path $registryPath))
{New-Item -Path $registryPath -Force}

#Enable silent account configuration
New-ItemProperty -Path $registryPath -Name 'SilentAccountConfig' -Value '1' -PropertyType DWORD -Force | Out-Null
#Enable files on demand
New-ItemProperty -Path $registryPath -Name 'FilesOnDemandEnabled' -Value '1' -PropertyType DWORD -Force | Out-Null
#Prevent users from moving their Windows known folders to OneDrive
New-ItemProperty -Path $registryPath -Name 'KFMBlockOptIn' -Value '1' -PropertyType DWORD -Force | Out-Null
#Silently move Windows known folders to OneDrive
New-ItemProperty -Path $registryPath -Name 'KFMSilentOptIn' -Value $TenantID -PropertyType String -Force | Out-Null
#Setting this value to 1 displays a notification after successful redirection
New-ItemProperty -Path $registryPath -Name 'KFMSilentOptInWithNotification' -Value '0' -PropertyType DWORD -Force | Out-Null
#Prevent users from redirecting their Windows known folders to their PC
New-ItemProperty -Path $registryPath -Name 'KFMBlockOptOut' -Value '1' -PropertyType DWORD -Force | Out-Null
```

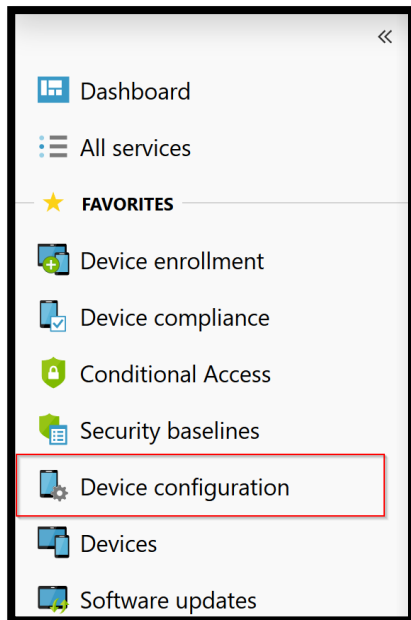

Deploy your script

1

Browse to:

<https://devicemanagement.portal.azure.com> and click on

Device Configuration

2

Add your powershell script.

Settings and Scope can be left as default.

Add PowerShell Script

Windows 10 and later

* Name
OneDrive KFM ✓

Description
Enable OneDrive KFM ✓

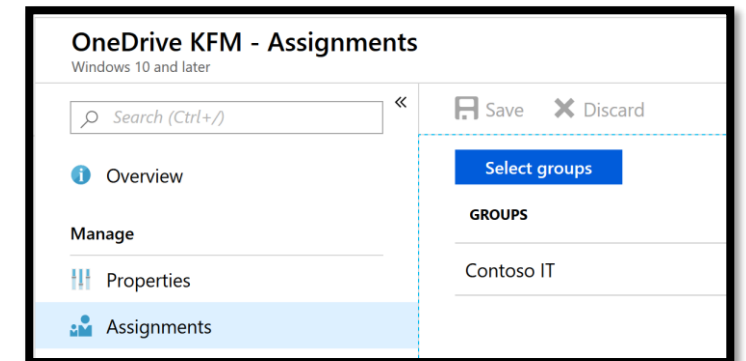

* Script location: ⓘ OneDriveKFM.ps1 📁

Settings
Configure >

Scope (Tags)
0 scope(s) selected >

3

Assign your script to a pilot group to test out the behavior.

Monitor and troubleshoot

Monitor run status

You can monitor the run status of PowerShell scripts for users and devices in the Azure portal.

In PowerShell scripts, select the script to monitor, choose **Monitor**, and then choose one of the following reports:

- Device status
- User status

Monitor

Device status

User status

Troubleshoot scripts

Agent logs on the client machine are typically in `\ProgramData\Microsoft\IntuneManagementExtension\Logs`. You can use [CMTrace.exe](#) to view these log files.

Here is the path: `c:\programdata\microsoft\intunemanagementextension\logs`. You can download configMgr tools (cmtrace.exe) to view the log friendly and dynamically.

- IntuneManagementExtension.log is the main client log file, it contains all the agent check in, policy request, policy processing and reporting activities.
- AgentExecutor.log is the log file to track Powershell script execution details.
- ClientHealth.log is the log file to track sidecar agent client health activities

<https://docs.microsoft.com/en-us/intune/intune-management-extension>

Monitor with PowerShell

Script will check:

Know Folder Move (KFM) eligibility (for whatever device it was run on)

Payload details (number of items and size of content within known folders)

KFM status (have the known folders been moved to OneDrive)

KFM GPO state (what GPOs have been set)
